

SMARTBRIDGE

Date: 4 July 2026[cite: 2]
Team ID: XXXXXX[cite: 2]
Project Name: Credit Card Approval Prediction System[cite: 2]
Maximum Marks: 1 Mark[cite: 2]

Communication SKILL WALLET

A SmartBridge Product[cite: 2]

Communication Plan:

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed.[cite: 2]

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily[cite: 2]	Slack / MS Teams	Core Project Team	Share daily progress, upcoming tasks, and identify immediate blockers.
2	Progress Update	Weekly[cite: 2]	Jira / GitHub	Project Lead & Team	Track sprint progress, review model development milestones, and update tasks.
3	Issue / Bug Discussion	As Needed[cite: 2]	Slack / Discord	Developers & Data	Debug code errors, handle

		2]		Scientists	data preprocessing issues, and resolve model deployment bugs.
4	Stakeholder Review	Bi-Weekly[cite: 2]	Zoom / Google Meet	Team & SmartBridge Mentors	Present current model accuracy, gather feedback, and align with project requirements.
5	Final Demo Rehearsal	Once[cite: 2]	MS Teams	Entire Team	Run through the complete end-to-end presentation and web app testing before final submission.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Misalignment on Feature Engineering: Team members were using different versions of the cleaned dataset, leading to inconsistent model results.	Created a centralized GitHub repository with a dedicated data-preprocessing script to ensure everyone worked with the same training data.
2	Delayed Bug Resolution: Technical blockers regarding model deployment (e.g., Flask/Streamlit integration) were stalling progress.	Set up a dedicated #bug-fixing Slack channel and instituted an "As-Needed" huddle rule to resolve deployment blockers within 2 hours.
3	Feedback Gap with Mentors: Unclear expectations regarding evaluation metrics (ROC-AUC vs. Accuracy) for the imbalanced credit card dataset.	Scheduled an ad-hoc alignment call with the SmartBridge mentor and documented the preferred evaluation metrics in the shared project workspace.

A clean, distraction-free markdown editor. Type on the left, see the rendered output on the right.

Text Formatting

Markdown makes it easy to format text. You can write in **bold**, *italic*, or ~~strikethrough~~. Combine them for ***bold italic*** text. Use `inline code` for technical terms.

Lists

Unordered lists use dashes, asterisks, or plus signs:

- Import files from GitHub, Dropbox, or Google Drive
- Export to Markdown, HTML, or PDF
- Drag and drop files directly into the editor

Ordered lists are numbered automatically:

1. Write your markdown
2. Preview the rendered output
3. Export or save to the cloud

Nested lists work too:

- Cloud integrations
 - GitHub repositories
 - Dropbox folders
 - Google Drive files
 - OneDrive and Bitbucket
- Local features
 - Auto-save to browser storage
 - Image paste from clipboard

Task Lists

- ☒ Set up the editor
- ☒ Write some markdown
- ☐ Connect a cloud service
- ☐ Export the finished document

Links and Images

Link to any page with [inline links](#) or use [reference-style links](#).

Images use a similar syntax:

Your Image Here

Blockquotes

The art of writing is the art of discovering what you believe.

— *Gustave Flaubert*

Blockquotes can contain other markdown elements:

Tip: Use `Cmd+Shift+Z` to enter zen mode for distraction-free writing.

Code

Fenced code blocks support syntax highlighting:

```
function greet(name) {  
  return `Hello, ${name}.`;  
}  
  
console.log(greet("world"));
```

```
def fibonacci(n):  
    a, b = 0, 1  
    for _ in range(n):  
        a, b = b, a + b  
    return a
```

Tables

Shortcut	Action
Z	Toggle zen mode
Escape	Exit zen mode
?	Keyboard shortcuts

Tables support alignment:

Feature	Status	Notes
Markdown editing	Active	Monaco-powered
Live preview	Active	Scroll-synced
Cloud sync	Available	5 providers
PDF export	Available	Server-rendered

Footnotes

Dillinger supports extended markdown syntax including footnotes^[1] and definition lists.

Math

Inline math: $E = mc^2$

Block equations:

$$\sum_{i=1}^n i = \frac{n(n+1)}{2}$$

Your documents save automatically. Start writing.

1. Footnotes appear at the bottom of the rendered preview.
